

The Orbit

Armillary Sculpture

Thank you for bringing The Orbit home. A good piece lasts for years when it gets a little regular attention, and none of it takes much effort. This guide covers what I would do to keep yours looking the way it did on day one.

Marc, Founder

EVERYDAY CARE

- Dust weekly, using a soft brush to reach between the rings.
- Pick it up with both hands, cradling it from underneath. The rings are not handles.
- Keep it dry. The rings are iron, so standing damp can start rust.
- Keep cleaners simple so the bronze undertones stay as they are.

CLEANING, STEP BY STEP

- 1 Brush the dust off each ring with a soft, clean brush, working one ring at a time.
- 2 Wipe the rings with a dry microfiber cloth while supporting the sphere with your other hand.
- 3 Use a barely damp cloth only for marks, and test a hidden spot first.
- 4 Dry thoroughly with a clean, dry cloth.

PLEASE AVOID

- Pulling, twisting, or pressing on the rings, above all where they cross
- Metal polish, which can strip the bronze tone
- Water, rinsing, or soaking, which can rust iron
- Abrasive pads and gritty cleaners

PLACEMENT AND HANDLING

- Cradle it with both hands from underneath whenever you lift it.
- Rest it on a flat, stable surface and check that it is sitting steadily before you let go.
- Keep it away from cords and fabric that can snag on the rings.

GOOD TO KNOW

The bronze undertones are a finish over iron, so they show up most under warm light and change as you move around the piece. That is the finish doing its job.

In ancient Rome, the Lares were the guardians of the household. We took the name because a home should feel looked after, and so should the things in it.
